

Easy DIY Cupcake Stand

Materials

- bowl
- small plate
- small cup, egg cup, sundae dish, or candlestick
- large bead or knob
- E6000 or similarly strong clear, waterproof glue

Directions

1. Glue the parts together.
2. Let dry.

Because you are gluing these pieces together try not to get dishes with scalloped edges, you want a nice clean edge to put glue on. My scalloped edged dish was at the bottom (non-glued) of my dish, not a problem!

Note: A drawer knob will work for the top if you can remove the screw and it will still look nice. Otherwise, a large bead works well.
